

Keynote 4

Virtual Reality, a learning tool for health profession education

Uwe Weber, MME

Head of Media and Education at the Bern College of Higher Education of Nursing

Claudia Schlegel, PhD, MME

Head of Skillslab at the Bern College of Higher Education of Nursing

Abstract

Virtual reality is a contemporary simulation method that is currently upgrading medical education. VR provides a 3D and dynamic view of structures and the ability of the user to interact with them. The recent technology allows the user to have a realistic and interactive experience; which enables hands-on-procedures.

In this workshop, you learn how to use the VR glasses in an educational context for health profession education. In a second step you have the possibility to experience the virtual world yourself and learn what educational settings are suitable for students in undergraduate education.

Uwe Weber, MME, RN

Master of Medical Education, University of Bern, Switzerland. Certificate of Advanced Studies in Media and Education at the University Duisburg-Essen, Germany. Nursing background in general practice and operating theatre. Currently, development of programs in digital learning and virtual reality simulations, for nursing education. Responsible for the postgraduate program in endoscopy for nurses. Keynote speaker in national and international conferences about virtual reality and endoscopy.

Claudia Schlegel, PhD, MME, RN

PhD, School of Health Profession Education, Maastricht University, The Netherlands. Master of Medical Education, University of Bern, Switzerland. Certificate of Advanced Studies in Safety, Quality Informatics and Leadership, Harvard Medical School, Boston, USA. Currently, project researcher in the cross disciplinary research, together with Prof. Roger Kneebone at the Imperial College London, UK. Member of the External Advisory Committee University of Minho, Portugal.
